GULERYUZ

JOURNEY TOWARDS THE FUTURE

Güleriüz was established in 1967 and it has come from the old days of wood bodied buses to producing today's modern urban buses.

Our plant is located in Bursa / Turkey and have 70.000 sqm area. Güleriüz has a capacity of producing 700 buses per year. 70% of its annual production is for export mainly European Community countries. Remaining 30% is for domestic markets.

Over 50 years of experience of producing buses, Güleriüz is always a head of safety and robustness. Customer satisfaction and quality are our major motives when designing and producing a bus.

Along with its experienced staff and innovative structure, it is a rapidly growing company which is responding to customer expectations in short period of time.

DESIGN & SAFETY

Ecoline has 12 m and 10.50 m length and engine variations from diesel engine and electric.

Our vehicle has been designed and produced in conformity with European Union type approval directives (2007/46 EC). The 7-inch LCD monitor and camera can be used to monitor the vehicle reverse drive, passenger compartment, mid-door passenger entry and right-hand side.

All lightening including head and tail lights are LED which consumes minimum electric.

Standard systems:

- ABS (anti breaking system)*
- ASR (acceleration slip regulation)*
- ATC (automatic traction control)*
- BSB (bus stop brake)*
- ELC (electronic leveling control)*
- LWC (lining wear control)*
- RI (retarder integration)*
- Brake lining wear control*
- Fire warning system*
- CCTV preparation*

COMFORT

COMFORT

Ecoline city bus is engineered and designed for public transportation in and around the city. It provides safe and comfortable journey for all passengers.

The driver's cab isolated from the passenger compartment and the ergonomically designed dashboard ensure maximum comfort for the driver. There are adjustable steering column, comfortable pneumatic driver seat with 3 point safety belt, folding armrest, and multi direction adjustments.

Ecoline has a significant passengers capacity, wide seating space, a high capacity air condition and heaters. There are also specified area for disabled people and a wheel chair area. Window level has been carefully designed to have a wide field of view.

It is easy to get on the low floor bus with maximum 340 mm height. With the kneeling system (270 mm), passengers of all ages can safely get in and out. Manual ramp help handicap person to access easily. USB charging connection is installed for passengers to easily reach during travel.

OPERATIONAL EFFICIENCY

The operational expenses are far more important than most of the element when it comes to selection of a bus. Guleryuz is very well aware of that fuel consumption is the one of the biggest cost for operators. With new generation Euro 6 engines and automatic transmission compatibility provides the lowest fuel consumption of its class. At the same time new facelift and weight reduction program has also effects the low fuel consumption.

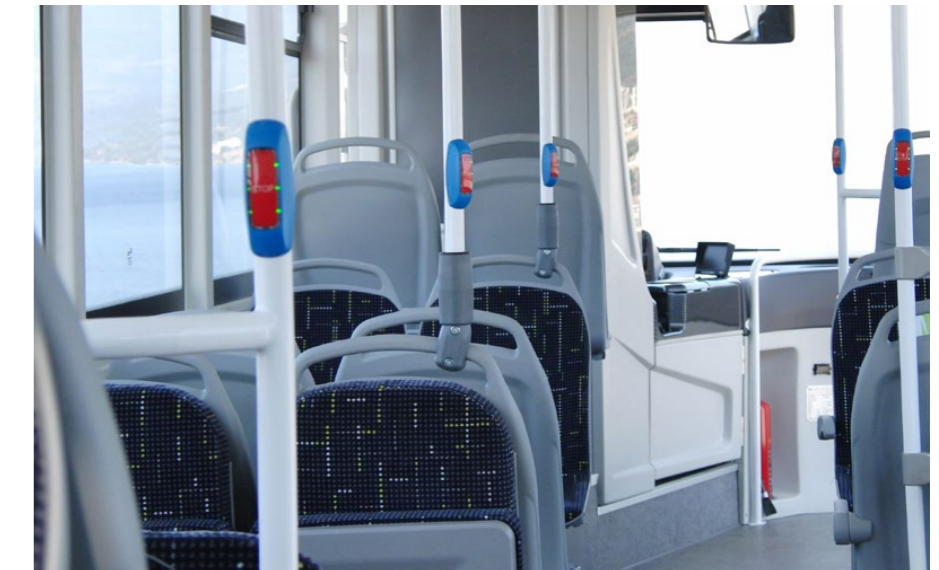

This also means that low CO₂ emission level to have a clean and green environment for city center operations.

The construction of the vehicle is robust and the vehicle provides the first day view of the vehicle over time.

Our bus has the most passenger-carrying capacity vehicle in its class. It has the ideal dimensions for urban use with its variety lengths of 12mt, 10.55mt.

The large size of the engine compartment ensures that service time is reduced and component replacement is very easy. In addition, the large compartment provides the engine required for air intake.

We are serving with wide dealer and service network all around the Europe and in Turkey.
